JOHN KOLCUN

Software Engineer

SUMMARY

Full-stack developer with agile experience who loves to learn and solve challenges. Proven track record of creating and implementing successful front and back-end web applications for clients.

WORK EXPERIENCE

Software Engineer at 100Devs Agency | Remote

Dec 2020 — Present

- Collaborated with a team of developers to build modern and responsive web applications using best practices. Utilized version control with Git and agile principles for project management.

- Created My Gratitude Journal, a full-stack site which allows users to store their daily gratitudes. App includes registration, login, and JWT authentication with Node.js and Express. Built additional features incrementally, such as inspirational prompts from RapidAPI and Amazon S3 image storage.

- Developed a ReactJS yoga resource that presents yoga pose and Youtube API data. Front-end created using the Material-UI library. Back-end created with Node.js and Express. Maintained version control with Git and deployed to Heroku. Received an excellent review from the client.

- Executed Wordpress website development and troubleshooted CMS like Salesforce and Hubspot, earning 5-star reviews on Upwork.

Projects:

- Cee-lo Four-Five-Six Game: Programmed a React.js dice game against a computer opponent with seven different winning conditions. Developed tests with Jest.

- What's Trending Today App: Integrated data from The Movie Database API to view top trending shows and details on each show like poster, network, and homepage link.

Agile Product Owner at Yoga International | Remote

December 2016 — March 2022

- Collaborated with multiple Agile teams, including development, content, and operations to introduce new features to serve customers.

- Created course sales pages with Bootstrap, HTML, and CSS.

- Implemented and maintained the marketing product roadmap and backlog of work through the product's lifecycle.
